

National Museum of Health and Medicine

Otis Historical Archives

OHA 19 Curatorial Records: Numbered Correspondence

Date of Records: 1894-1917

Size: 30 Boxes

Finding Aid: Revised by Eric W. Boyle (2012)

Access and Use: The Otis Historical Archives is committed to providing open access to its collections as far as possible within the limits of privacy and confidentiality. Access to this collection is at the discretion of the Otis Historical Archives and material contained within the records may be subject to review before access is granted. Files containing private patient information and protected administrative and grant records are currently closed to researchers.

Series/Scope and Content Note: Army Medical Museum (AMM) correspondence and accompanying documents in this collection have been numbered according to a system used in the late 19th and early 20th centuries which assigned a distinct number to particular topics or correspondents. The collection includes the notable correspondence of curators Walter Reed (including records relating to his yellow fever research), James Carroll, F.F. Russell, Eugene R. Whitmore, and C.C. McCulloch, Jr with George Sternberg and others.

The list in this finding aid is preliminary; it is from the first three boxes in the collection, as well as some additional material. It only covers the years 1894-1900 when Walter Reed was the Museum's curator. It is a direct output of the master database which is currently only accessible to Museum staff. This preliminary list is designed to provide an overview of the type of correspondence included in the overall collection.

Each entry uses the following format:

- ❖ Number
- ❖ Date
- ❖ To
- ❖ From
- ❖ Subject
- ❖ Keywords (AC= Anatomical Collections of Museum; HC=Historical Collections)
- ❖ Notes
